

## SharkTime Software releases wList 2.1

Making a list of files and folders now easier and more flexible than ever

Warsaw, Poland — February 8, 2010 — SharkTime Software today introduced wList 2.1, the next release of its powerful directory listing software with few new features including comfortable right click context menu, character encoding selection and export to HTML web page or M3U8 playlist.

wList fills a gap in the software provided by Microsoft with Windows — the lack of a truly simple directory listing tool. wList is easier than the DOS 'dir' command. Unlike some other tools, filenames are saved correctly, even if they contain national or international characters; wList supports Unicode. wList is the best software of its kind, because it is simpler, more flexible, and provides excellent search filters and filtering tools.

### wList 2.1 details

<b>License:</b>	Shareware
<b>Price:</b>	Free to try, \$15(US) to buy
<b>Producer:</b>	<b>SharkTime Software</b>
<b>Platform:</b>	Windows 2000/XP/Vista/7
<b>Published:</b>	February 8, 2010
<b>More info:</b>	<a href="http://www.sharktime.com/wlist/">www.sharktime.com/wlist/</a>

wList is extremely useful if you have a large number of CDs/DVDs. After saving a list of the contents of each disc one just once, you can choose to search multiple lists at the same time, whenever you need to. You'll never need to try one CD after another looking for the right file again.

You save time. With wList, you can make simple file lists from large, complicated folders in no time. Just use right click context menu. wList has a very simple interface, and many carefully chosen features. You can open any file from the list with wList: just double click the filename to open and view the selected file.

wList gives you control. You can control the style of your folder list. You can control the content of your list by choosing to skip certain types of files. You can easily choose to list only files of certain types, such as: archive files, audio, documents, executable files, pictures, music playlists, programming, text files, video files, and saved web pages.

### Uses of wList

- Searching. wList is essential for finding the file(s) you want when you have a lot of them. Search through a lot of CDs/DVDs or external drives at once, without having to waste time changing drives or disks. [Read More...](#)
- Printing. You can print a directory list and use it — perhaps as a CD cover. [Read More...](#)
- Archiving/Backup. You can make a list of files before archiving them. [Read More...](#)
- Impress. Create a complete list (playlist) of all of your music, pictures or video files. [Read More...](#)
