

FOR IMMEDIATE RELEASE

SharkTime Software Releases Win Grep 1.0 Visual Grep Tool & Multi-Phrase Text Filter

Release Date: July 20, 2026

New lightweight utility replaces command-line complexity with a clear three-pane layout, multi-word search, and instant list comparisons.

GDYNIA, Poland – July 20, 2026 — *SharkTime Software* today released **Win Grep**, a fast visual tool built to take the pain out of filtering text files and system logs on Windows.

For years, searching through large text files meant opening a terminal window and wrestling with `grep`, `findstr`, or PowerShell flags. Win Grep brings that power to a modern GUI — making text analysis fast and accessible for office workers, while serving as a handy scratchpad that IT pros can easily recommend to non-technical teammates.

Text Search Built for Humans

Instead of memorizing command-line syntax, Win Grep focuses on speed and visual feedback:

- **3-Pane Layout (INPUT → FILTER → OUTPUT):** Paste your text on the left, pick your options in the middle, and see your clean results live on the right.
- **Multi-Phrase Filtering:** Search for an entire list of keywords simultaneously instead of running searches one by one.
- **List Operations:** Merge, intersect, or subtract datasets line-by-line to compare reports or clean up word lists in seconds.

"Working with text shouldn't require searching online for forgotten command-line switches," said the creator of Win Grep. "We built Win Grep to make data filtering instant and visual. Drop in your text, set your criteria, and get your answer."

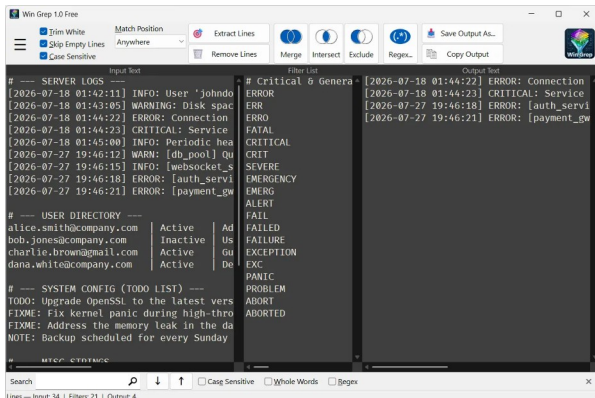

The app operates 100% locally to protect user privacy and includes Regex support for power users.

Pricing and Availability: Win Grep 1.0 is compatible with modern versions of Windows (10 or later). The update is available as a **free trial version** at via the [Microsoft Store](#).

About SharkTime Software: *SharkTime Software* is an independent software company focused on the development of practical, high-quality software solutions. The company specializes in Windows applications and modern machine learning and artificial intelligence technologies.
